This collection of information is required by 37 CFR 1.5. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to 2 hours to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Amendments and request for reconsideration from requirement for restriction to application: DE NOVO SYNTHESIZED PLASMID, METHODS OF MAKING AND USE THEREOF

Applicant Name: Chuan Li

Date: October 12, 2007

Application/Control Number: 10/068,664

Art Unit: 1636

a.) Introductory Comments

These are amendments and request for reconsideration from requirement for restriction to application (Application Number: 10/068,664) filed on February 6, 2002.

In claim 36, the phrase "SEQ ID NO: 41" is changed to "SEQ ID NO: 35".

The applicant disagrees with the requirement for restriction and request for reconsideration of the plasmids presented in the claims 26 to 40 to be examined in one group as a single invention.

The plasmids presented in claims 26 to 40 are synthesized by same design. The design was schematically illustrated in Fig. 1 of the application. As a matter of fact, all plasmids presented in the application were synthesized by this design and they were synthesized simultaneously in the same series of experiments.

The plasmids presented in the application have different sequences because they consist of different replication origins and different selection markers. However all of these different replication origins and selection markers are connected by two linker sequences. These linker sequences are CCGCCGCGCCGC and GGCGGGGCGCCCGG GCGGCGGGCG. No other natural or man-made plasmids except those presented in this application contain exactly all these two linker sequences. These linker sequences are intrinsic connection of these plasmids. They are the evidences that these plasmids are made by same design. They are the evidences that these plasmids are related.

In addition, these plasmids are functionally related. All claimed plasmids are based on pACYC replication origin which gives low copy number. Unexpected results of high copy number are observed with claimed plasmids. This functional property is useful because the protein expression in high copy number plasmids is higher than the expression in low copy number plasmids. High copy number plasmids are also useful in plasmid DNA production. Furthermore, the claimed plasmids appear to confer higher antibiotic resistance capacity for the host cells. Therefore the claimed plasmids are clearly functionally related.

Therefore the applicant presented evidences on the record that the presented plasmids are structurally and functionally related and respectfully requests that the petition for the plasmids presented in the claims 26 to 40 to be examined in one group as a single invention is granted.
